

Protect navigation against undetected web threats

We live in a world where **80% of cyberattacks happens on the web and 95% leverage people interaction, hitting the target within the first 72 hours 85% of times.** In a scenario like this, traditional solutions adopting a reputational approach can't properly detect newborn threats like these in time.

Ermes' revolutionary approach reduces your company window of exposure from days to minutes, increasing its Web protection **by +25%** vs. Top Security Vendors.

Move to Ermes' Intelligent Approach

PREVENTION

Block Information Leakage

AI REAL TIME BEHAVIORAL APPROACH

DETECTION

Our Testimonials say:

Ease of installation

Ermes was easy to install and easy to manage: all employees got protected from web threats and could browse faster without annoying contents in a matter of minutes.

Mauro Baldoni, CIO @ Bonelli Erede

Protection Everywhere

Its protection starts on the browser, where the greatest dangers creep in. Ermes protects our users browsing wherever they are.

Matteo Herin, CISO @ Carrefour Italia

Cutting-edge Technology

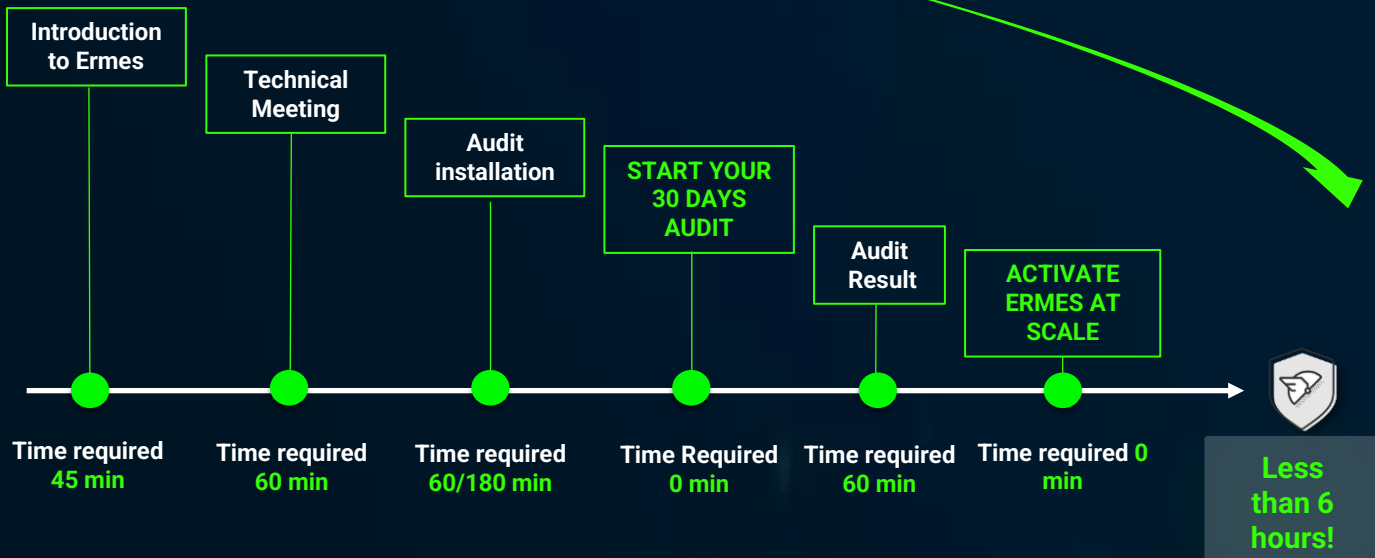

I found a revolutionary and unique technology in Ermes able to block more than 100 million web connections per day using Artificial Intelligence with extreme effectiveness.

Ruggero Platolino, CISO @ Luxottica

Chosen by top companies across all industries

The Ermes **Success Indicators**

Activate Ermes within 30 days and get the valuable Audit to evaluate your browsing risk.

About Us

We are on a mission to provide breakthrough solutions and make the Web a safer place.

Founded by Hassan Metwalley within the incubator of Politecnico di Torino (I3P), Ermes - Intelligent Web Protection is one of the most important and influential global companies using AI in the Cybersecurity field. Our technology is the result of more than **3.2M Euros and 30+ years of R&D.**

Our solution analyzes the behavior of web services in real time through patented AI algorithms proactively blocking what represents a risk profile, regardless of the reputation of websites and overcoming the limits of traditional solutions to protect people against the most sophisticated forms of people-centered attacks wherever they are located.
